In what areas and how can we help companies in the financial sector?

OUR VALUES

We share our knowledge
Honestly and to the point
Professionally

Good intentions always
come first
Extreme Ownership

CORE COMPETENCIES

Business analysis

Corporate banking
Logistic
Retail
Leasing
Factoring

System analysis

Process modeling
Functional requirements
System integrations

Implementation

Full-stack Development
Mobile Development
Quality Assurance
CI/CD Development

Product design

Design Thinking
UX / UI Design
Low and High-fidelity mockups
Branding

Deployment

DevSecOps
Alerting & Monitoring
Cloud Managed Services
Infrastructure as a Code

Service

Incident Management
Problem Management
Service Level Management

AREAS OF EXPERTISE

Automation and optimization

Sales processes for financial products
Post-sales administration processes
for financial products
Operational and internal processes

AI

Content classification and information verification
aiPrototyping

Process modeling (eventstorming)

Microsystems (functional application frameworks)

TYPES OF SYSTEMS

Customer portal

Selfservices
Online applications

Process environments

Credit processes
Factoring processes
Claims handling processes
Back-office processes

ROADMAP

Flowee BPMS Timeline

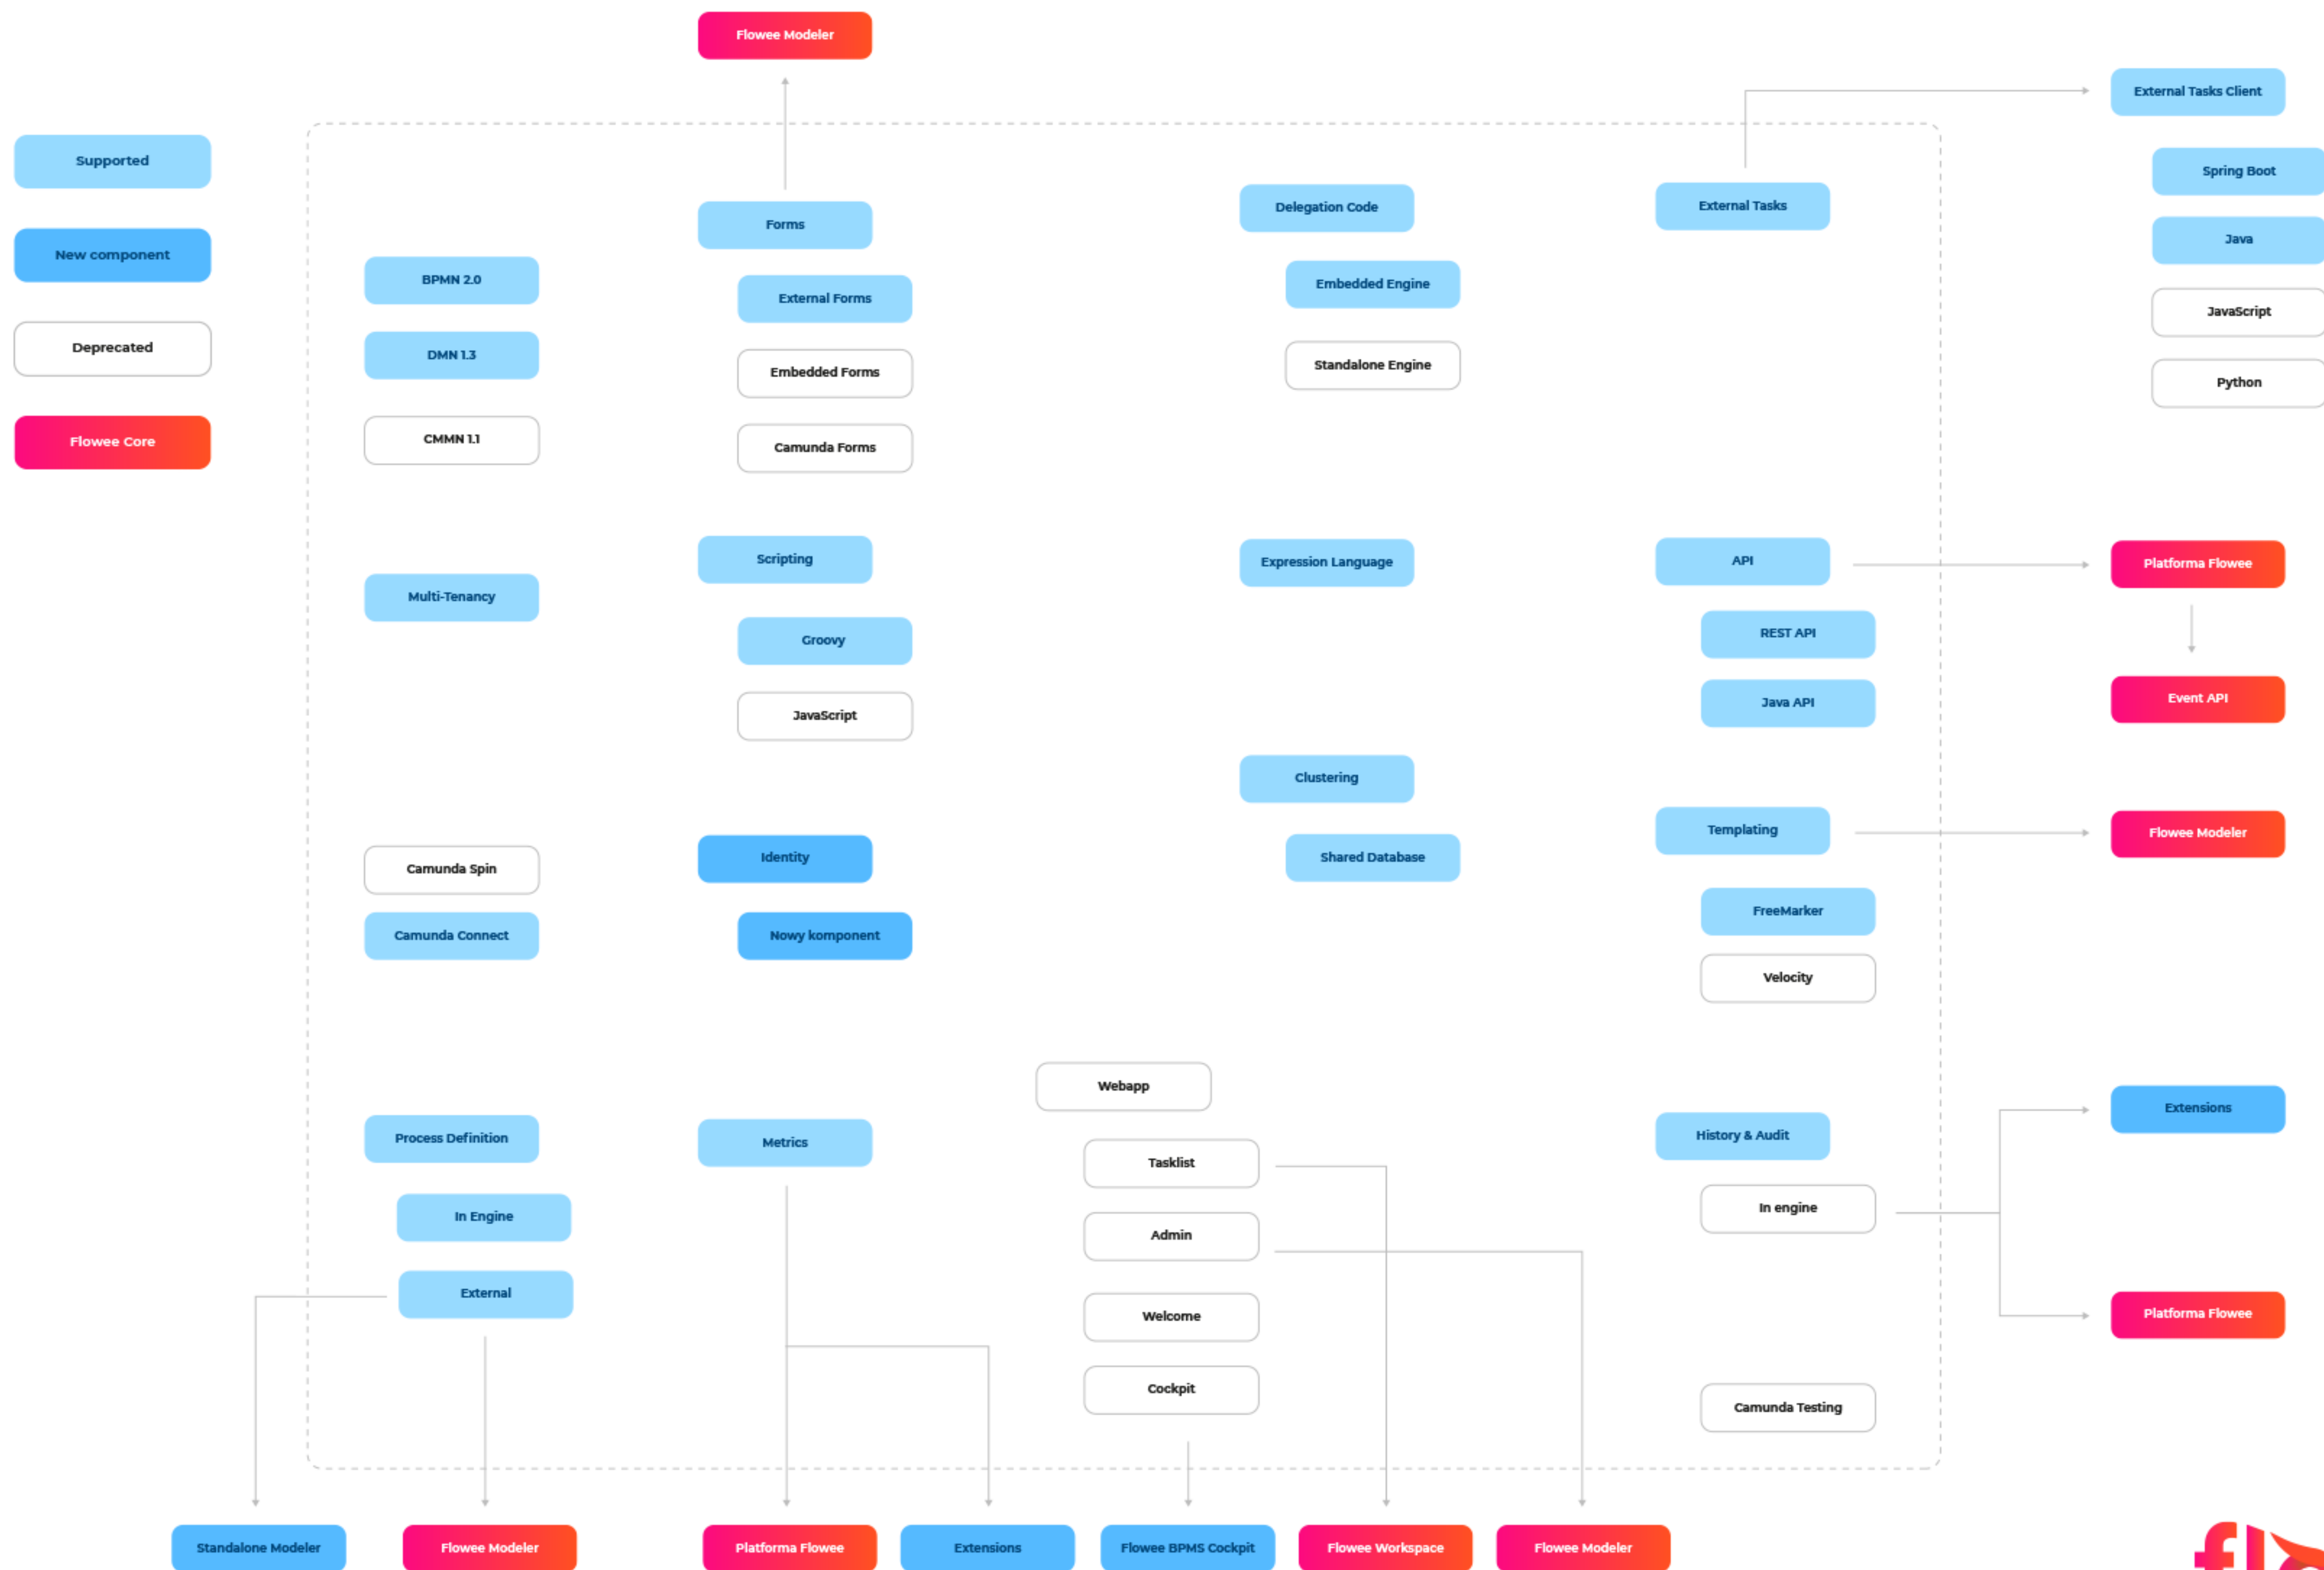

What is Flowee BPMS?

Flowee BPMS is a lightweight and secure BPMN engine based on Camunda. It was created with the end of support for Camunda 7 in mind, which comes with the release of version 7.24. It is ready to integrate with any business application. The engine implements BPMN 2.0, CMMN, and DMN standards, enabling the modeling and automation of complex processes. Flowee BPMS is available in both **Community** and **Enterprise** editions.

The engine uses a database for persistent storage of process states, history, and tasks. Thanks to the **External Task Pattern**, it is ready for use with microservices. It allows for task assignment to users and defining roles and groups through integration with **LDAP**, **Keycloak**, or other sources.

FEATURES

Why choose Flowee BPMS?

Safe solution

All our solutions, including Flowee BPMS, meet the highest security standards, confirmed by the ISO 27001 certification.

Support in the Migration Process

If you need assistance with the migration process, we can not only provide guidance but also offer hands-on support for your IT operations. We help with migration to Camunda 7.24 as well as migration to Flowee BPMS.

Guaranteed Support

Flowee BPMS is available under both Open Source and Enterprise licenses, which ensures support from both the community and Finture's experts.

Cost Efficiency

Flowee BPMS is a more affordable alternative for institutions that run multiple Camunda instances and are limited by budget constraints.

Fully Integrated with the Flowee Process Platform

Flowee BPMS works as a standalone process orchestrator or fully integrated with Flowee. The integration includes: process repositories, forms, templates, metrics, and task history.

A Reliable Partner for Financial Institutions

We strive to meet the expectations of our business partners by delivering software of the highest quality. We hold an ESG Score: C, backed by certification.

LET'S TALK

Let's talk about the process challenges in your institution.

We'd be happy to show how Flowee BPMS – a process orchestrator, the Flowee process platform, or other IT solutions can support the processes in your institution.
